1 Overview

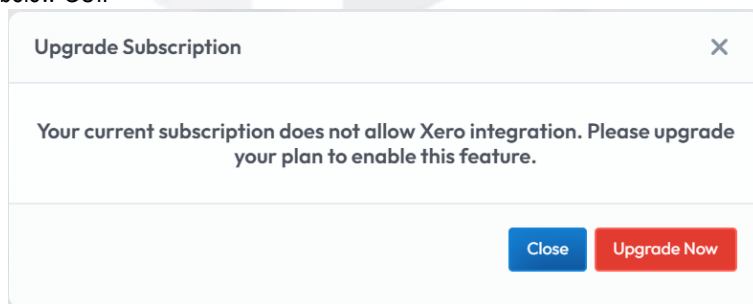

Pay Trade allows integration with Xero application to sync the invoices and bills from Xero to Pay Trade and vice versa. This integration makes the process easier upon the user who wants to use Xero for payments and Pay Trade for the trust accounting purposes. We generate journals and audit related documents from the data receiving during this sync.

Xero flow cycle

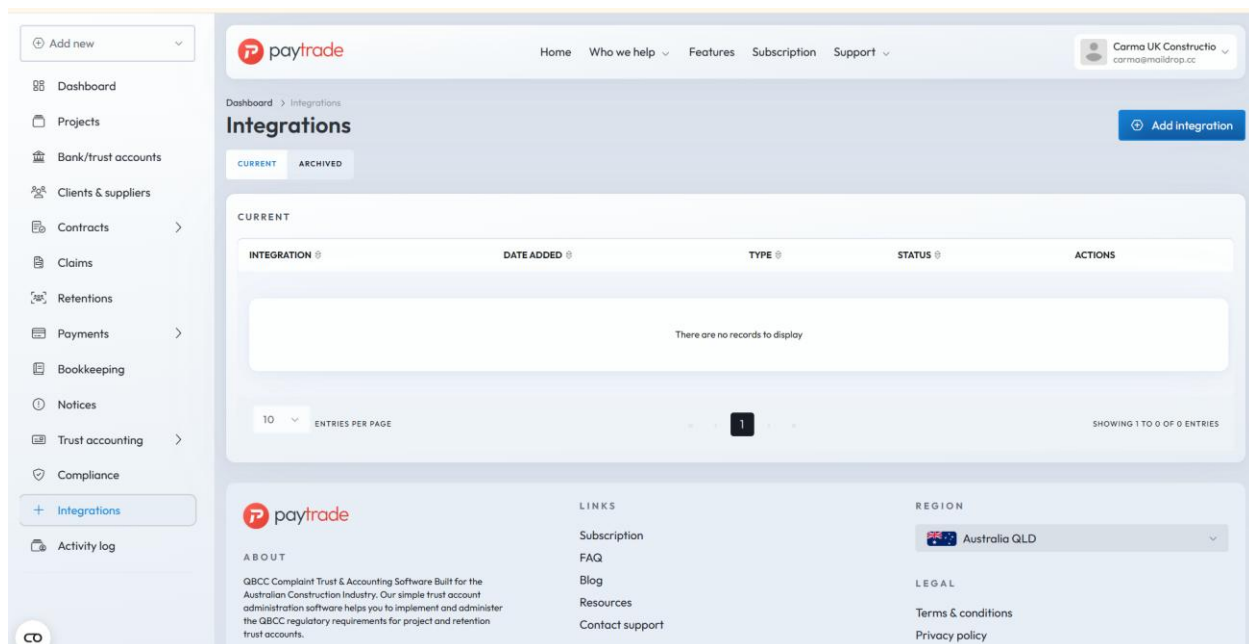

2 Integration

- Only the Premium user can map the Xero account with the Paytrade account.
- If the Unsubscribed user tried to map the Xero account with the Paytrade account, upgrade subscription message displays as shown in the below GUI.

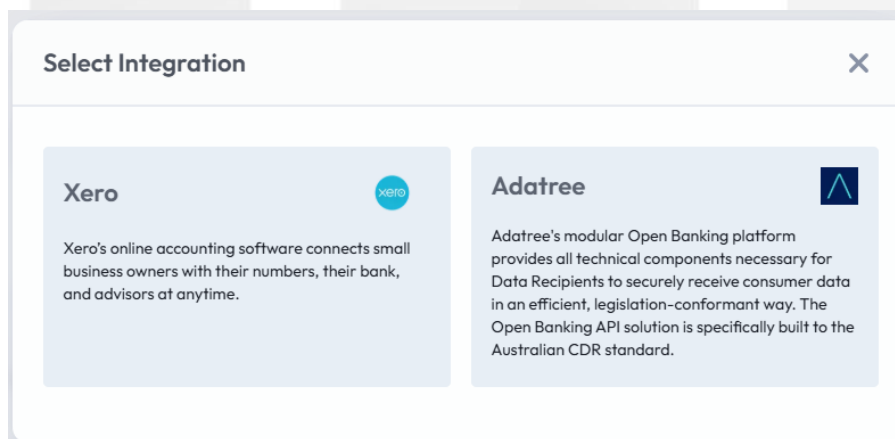

- Integration screen can be launched from the side menu 'Integration'
- The Integration screen UI is as mentioned in the below GUI.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

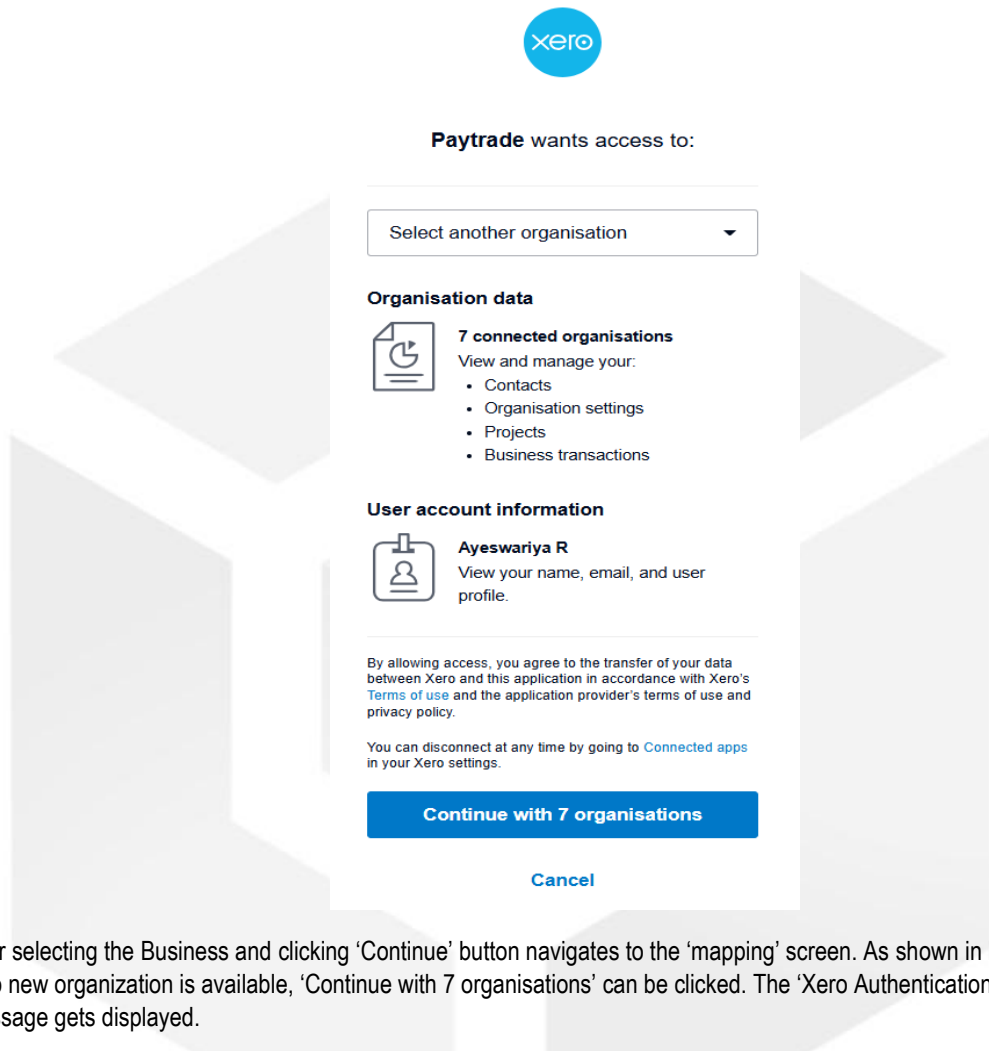

- On clicking the 'Add Integration' button it opens the 'Select Integration' popup screen with two options Xero and Adatree.

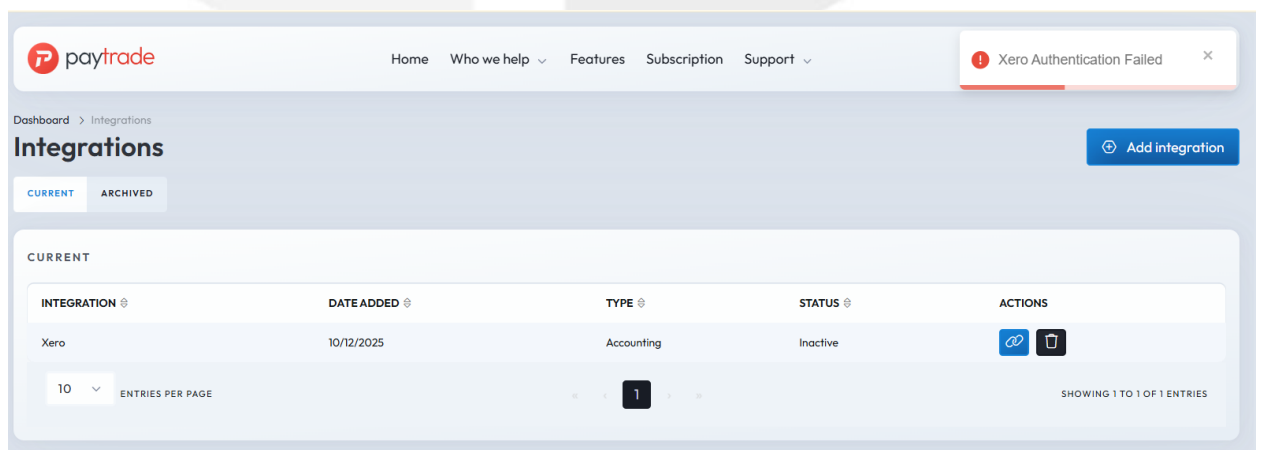

3 Xero

- On selecting the 'Xero' option, the popup screen opens with a dropdown to select the 'Xero Business account' to access.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

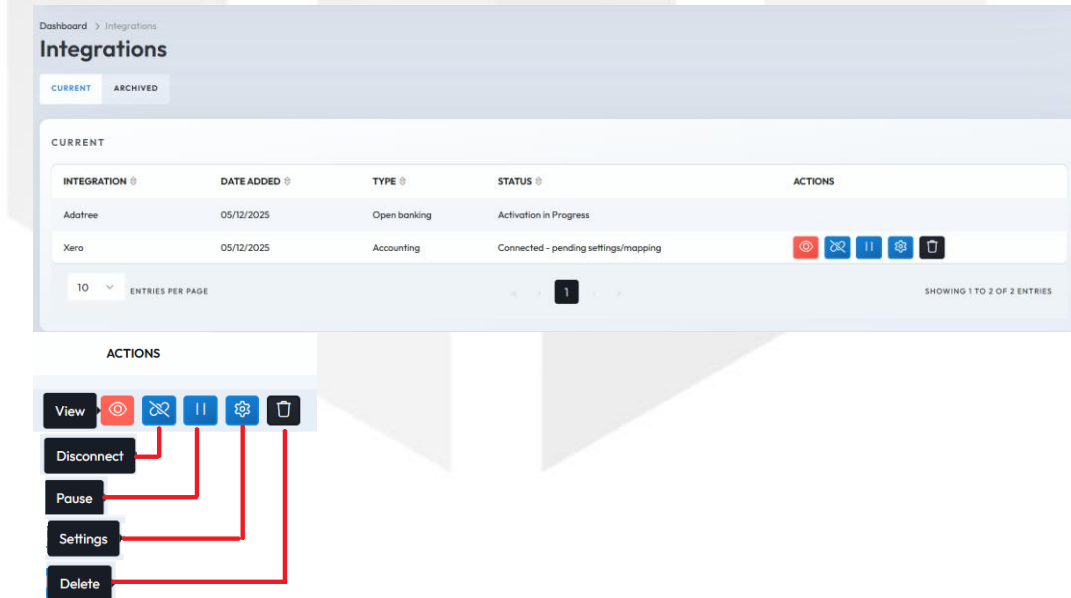

2. After selecting the Business and clicking 'Continue' button navigates to the 'mapping' screen. As shown in below GUI.
3. If no new organization is available, 'Continue with 7 organisations' can be clicked. The 'Xero Authentication Failed' message gets displayed.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

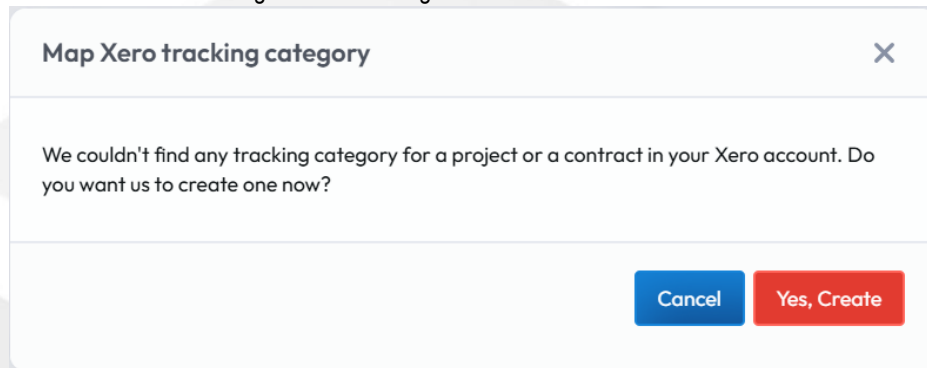

- Also under the list grid a record gets added. Under Integration column data 'Xero'. The status gets changed as per the function perform by the user.

- Connected - Active**
- Connected – Pending settings/mapping:** This is where there is a live connection, but the mapping and setting process hasn't been carried out.
- Connected – Paused:** This is where the user has manually changed the status to pause, which has paused bringing in new data and submitted data. The event continue, but are show with pause status and will require being manually triggered by the user.

B. Paytrade > xero syncing

1. The field 'Sync invoice as draft?' has a data 'Yes/No' if selected as 'Yes' the invoice from xero will save as draft in the paytrade.
2. Sync bill as draft? Field will also has a data 'Yes/No' If 'Yes' the Approved bill will also save as 'Draft' in the Claim screen.
3. Sync payments as draft?* field has a default data as 'No'.

C. Xero syncing > Paytrade

1. The field 'Sync invoice as draft?' has a data 'Yes/No' if selected as 'Yes' the invoice from paytrade will save as draft in the Xero.
2. Sync bill as draft? Field will also has a data 'Yes/No' If 'Yes' the Approved bill will also save as 'Draft' in the Claim screen.
3. Sync payments as draft?* field has a 'Yes/No'. If yes the payment under Xero will save as 'draft' else 'No' will save as Completed state.
4. Xero > Pay Trade system works on the basis of Receive Web Hook or scheduled check or unscheduled check prompted by transaction activity.

D. Xero account code

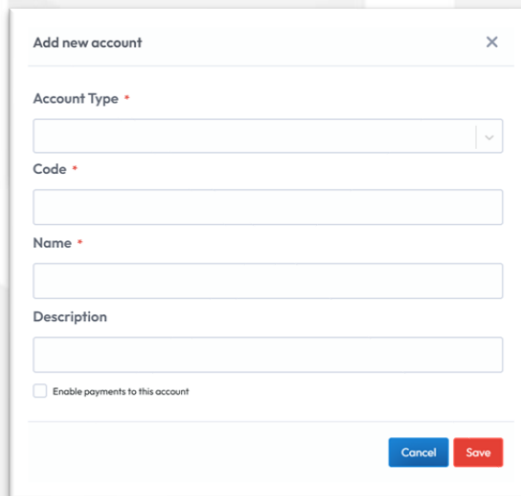

1. The section contains the list of field with the dropdown data 'In PayTrade, each field in the dropdown is mapped to the corresponding field in Xero, and the sync process takes place based on the selected data.'
2. When creating invoice and bills there are specific accounts that line items are mapped to. These accounts need to be input into the setting areas by the user which when Pushing data we push with these account fields, and when we get data, we validate against them to create a successful import.
3. Perhaps add a button to get account codes and another to view account codes and another to add retention account codes if not found and error case where the account number exists. We need to map to 4 retention account codes which users may already have, others will need to create.

Code Field	Example Code with Description	Functionality
Invoice Code	200 - Sales	In Xero, in the Invoice Account dropdown, you must select the mapped data under Invoice Code.
Bill Code	310 - Cost of Goods Sold	In Xero, in the Bill Account dropdown, you must select the mapped data under Bill Code.
Retention payable retained code	500 - Retention payable - Retained	In Xero, for Bills, you must select the mapped account Retention payable retained code from the Account dropdown. For retention amount withhold.
Retention payable release code	502 - Retention payable - Released	In Xero, for Bills, you must select the mapped account Retention payable release code from the Account dropdown. For retention amount release.
Retention receivable retained code	503 - Retention receivable - retained	In Xero, for Invoices, you must select the mapped account Retention receivable retained code from the Account dropdown. For retention amount withhold.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

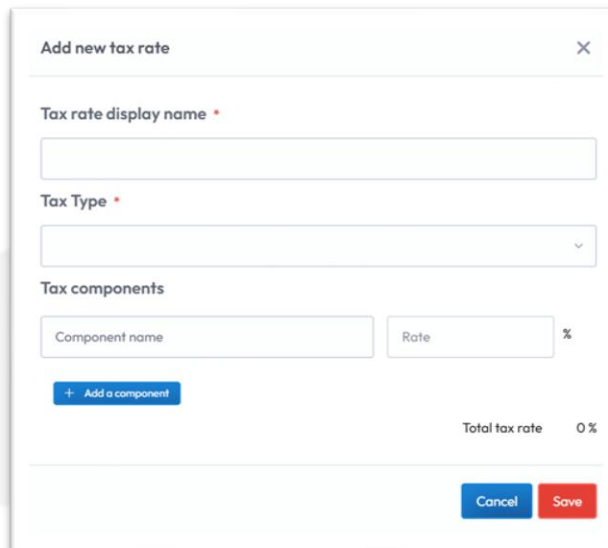

Retention receivable release code	504 - Retention receivable - released	In Xero, for Invoices, you must select the mapped account Retention receivable release code from the Account dropdown. For retention amount release.
Liability payable code	501 - Liability for defects - retention payable	In Xero, for Bills, you must select the mapped account Liability for defects – retention payable from the Account dropdown.
Liability receivable code	506 - Liability for defects - retention receivable	In Xero, for Invoice, you must select the mapped account Liability for defects – retention payable from the Account dropdown.

4. 'Add new account button' opens the screen where the data can be entered and saved which gets listed under all the account fields in the xero account code section.

5. Similarly 'Tax rate' can also be added using the 'Add tax rate' button. The added data gets listed under all the tax dropdown fields.
6. When syncing an invoice or bill from Paytrade to Xero, the tax code selected in Paytrade must match the tax code assigned to the corresponding Xero account. If the tax codes do not match, Paytrade should generate an error log indicating a tax code mismatch.
7. Each Bill or invoice in Xero has a reference. To create this reference we create a string of variables.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

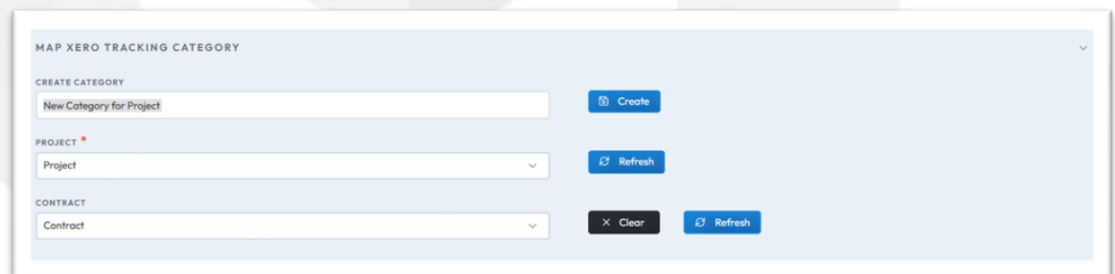

The screenshot shows a modal dialog titled "Add new tax rate". It contains the following fields and controls:

- Tax rate display name ***: A text input field.
- Tax Type ***: A dropdown menu.
- Tax components**: A section with two input fields, "Component name" and "Rate", followed by a percentage sign (%). Below these is a blue button labeled "+ Add a component".
- Total tax rate**: A label showing "0 %".
- At the bottom right are two buttons: "Cancel" (blue) and "Save" (red).

E. Map xero tracking category

1. The details of this section is mentioned in the point 12 & 13.
2. There is no separate API to link Paytrade modules with the Xero application, so these categories are used as the linkage to map the two systems.
3. New category can be created by using the 'Create' button. Once the new category name is filled in the 'Create Category' field the 'Create' button gets enabled.
4. Mapping categories in Xero are required to import data between Xero and Paytrade in both directions.

The screenshot shows a form titled "MAP XERO TRACKING CATEGORY". It contains the following sections and controls:

- CREATE CATEGORY**: A text input field with placeholder "New Category for Project" and a blue "Create" button.
- PROJECT ***: A dropdown menu with "Project" selected and a blue "Refresh" button.
- CONTRACT**: A dropdown menu with "Contract" selected, a black "Clear" button, and a blue "Refresh" button.

F. Webhook Schedule Setting

1. The section contains the text field named 'Execution wait time' where by default 30mins is set. The data is editable.
2. The Webhook auto sync happens as per the time mentioned in this field.
3. The field contains the label as 'Enter duration in mins (0-60)'.

15. The Receivable claim created in Paytrade should be under 'Confirm paid – matched' status to sync in Xero account.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

16. The sync error log gets trigger since to reason field data are missing out. On clicking the 'resolve' button it navigates to the invoices edit screen where all the mandatory fields can be filled and saved.

The screenshot shows the 'Sync log details' page for Xero integration. The page header includes the paytrade logo and navigation links. The main content area displays the sync status as 'Failed' for an 'Invoice webhook'. The error message is 'Missing reason for non-paid claim(s)'. Below the error message, there is a 'Resolve' button. The page also shows a table of 'IMPORTANT CHECKS' with various validation results (Failed, Ok). The 'Failed' status is highlighted in red, and the 'Resolve' button is also red.

17. Once the reason is saved, the receivable claim gets saved and list under the claim screen.
18. The journal gets recorded and notice also gets triggered.
19. Where invoices/bills have been added as part of a historical record onboarding, these will not be mapped to an existing Xero invoice. We could provide a field where Xero is integrated for users to enter historical invoice reference id's. This is similar to mapping and is likely to be done case by case when failed to import data.

3.7 Bills

1. In front the section lists the Count of Sync and Pending.
2. 'View all' button navigates to the Bills -Manage your paytrade and xero bills screen. Directly to the 'Mapped Bills' Tab.
3. This screen contains three tabs such as 'Mapped Bills', 'Paytrade Bills' and 'Xero Bills'.
4. Under 'Mapped Bills' tab, 'Auto map' button available which helps to auto map all the listed Invoices.
5. For every separate bills 'Unmap' button is available to unmap the paytrade bills from Xero linked bills.
6. Search field is available to find with 'Bill'.

15. The Billable claim created in Paytrade should be under 'Confirm paid – matched' status to sync in Xero account.
16. Except for the full payment the error log gets triggered for the 'Missing reason for withholding payment'.
17. Once the reason is filled, the Bill payment gets saved as 'Part payment'
18. The payment withhold reason log trigger will happen as per the 'schedule setting' timing.
19. For example, consider a claim with an amount of 1,500. A payment of 1,000 was made, leaving 500 as the pending amount. In reality, the payment type is Payless Full, but in PayTrade, it is recorded as Part Payment. As a result, the journals and notices are triggered for a part payment. Once the credit note for the pending amount is created in Xero, the corresponding payment in PayTrade is deleted, and the journal is reversed. A new journal is then created for the Payless payment, along with a new payment entry in Claims. Similarly, the original part payment notice is moved to the Archived tab, and a new notice is generated with a new notice ID for the Payless Full payment type.

HISTORY

API triggered from invoice webhook

Import failed

20. When the claim created with retention payment then after the bill payment a record gets created under the retention list.
21. When a payment is deleted in Xero, an error is triggered in Paytrade indicating that the payment type cannot be deleted. Selecting the Resolve option directs the user to the Payment Edit screen, where the 'Confirm paid' checkbox must be cleared. After it is unchecked, the payment is successfully deleted.
22. When a payment is deleted in Xero, Paytrade triggers an error stating that the payment type cannot be deleted. Clicking Resolve navigates to the Transaction Unmatch screen when the payment is matched in Paytrade. The transaction must be manually unmatched, after which the payment can be deleted in Paytrade.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

1. This section lists all the logs happening in the application.
2. It shows the data has been or has been attempted to sync. Also shows success, warning and failed cases
3. It show all other no mapped data over the previous month which a user may wish to edit and re-sync e.g. where they have forgotten to input a tracking id so our system hasn't identified it as relevant. The user can go back, edit and click refresh. Our system would then pick up the tracing id and reattempt to sync.
4. On clicking the **view** icon the Status Succeeded/ Failed status screen opens.
5. For the failed log the screen has a **resolve** button, on clicking it navigates to the respective screen to resolve the issue.
6. The reference is a uuid generated ID from database.
7. Once the issue is rectified the failed status changed to succeeded state.
8. In the front, the '**Refresh**' button is available to refresh the logs.
9. Total Number of Synced log count displays under 'Synced' section. Similarly warning count under 'Warning' and Failed log count under 'Issues'.
10. Once the failed log is resolved the issues count gets reduced.
11. The pagination and sorting option is available. The pagination is move to the next page since by default the totally 10 records per page, can be changed by using the pagination dropdown.

5 Schedulers

1. The system uses schedulers to automate data synchronization between Paytrade and Xero. It happens the modules such as Project, Bank account, Contact, contract and Invoice.
2. The scheduler will run once in a day, currently the timer is set at 12am UTC
3. In the below table the when the schedule error happens is mentioned.
4. The respective schedule error GUI is available under all the modules.

Module	Scenario	Error log to resolve
Project	Create a new project in Xero	On Clicking resolve it navigates to the Project screen,
Bank account	When a new Bank account is created	On Clicking resolve it navigates to the Bank account screen, we can create a any type of bank account as per our requirement.
Contact	New Contact created in the Xero	On Clicking resolve it navigates to the client/supplier screen, where the client /Supplier can be created.
Contract	New Contract created in the Xero	On clicking resolve it navigate to the Contract screen where the client/supplier can be created.

6 Webhook

1. We need to subscribe to the Contact and invoice to create and update webhooks.
2. We may also need to subscribe to the Webhooks for App Store subscriptions (TBC).
3. When a record is created, retrieve the full details and verify whether the mapped client/supplier, project, and contract are relevant.
4. Check whether the API trigger type matches the expected transaction step. If the format and step are valid, create a successful sync log, assign the resource ID to the claim, and generate the corresponding Paytrade event—either as a draft or completed—based on the system settings.
5. For the mismatch in the code, Edit, Delete error log gets trigger.
6. Listed the scenarios where the error log gets trigger below.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

Module	Scenario	Scenario Example
Invoice /Bill	Contact Mapping Mismatch	Mapped Data: Contact A is mapped to Contract A in Paytrade. Actual Scenario: In the Invoice, the user selects Contact B instead of Contact A. Result: Error: "Contact mismatch: The selected contact does not match the mapped contact for this contract."
Invoice /Bill	Project Mapping Mismatch	Mapped Data: Project X is mapped to Contract A and belongs to Contact A. Actual Scenario: While creating the Invoice, the user selects Project Y (which is mapped to a different contract or different contact). Result: Error: "Project mismatch: The selected project does not match the project mapped to this contract."
Invoice /Bill	Contract Mapping Mismatch	Mapped Data: Contact A is mapped with Contract A. Actual Scenario: In the Invoice, the user selects Contract B (which is mapped to Contact B or another project). Result: Error: "Contract mismatch: The selected contract does not match the contract linked to this contact."
Invoice /Bill	Account Code Mapping Mismatch	Mapped Data: For Contract A, the mapped account code is 400 – Income (or for Bills: 200 – Cost of Sales).

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

		Actual Scenario: In the Invoice or Bill, the user selects 460 – Miscellaneous Income instead of the mapped account code. Result: Error: “Account code mismatch: The selected account code does not match the mapped account code for this contract.”
Invoice /Bill	Tax Code Mapping Mismatch	Mapped Data: For Contract A, the mapped tax code is GST on Income (15%). Actual Scenario: In the Invoice, the user selects Zero-Rated Tax (0%) instead of the mapped GST code. Result: Error: “Tax code mismatch: The selected tax code does not match the mapped tax code for this contract.”
Invoice	S75 pending payment	1. You have a Bill with a pending payment for \$1,000 2. Create a Invoice on Xero 3. Under paytrade error trigger for the missing reason for the pending payment 4. Once the reason is filled and saved , the claim gets saved list under the Claim list grid.
Payment	Payment Edited in Xero	1. You have a Bill in Xero for \$1,000. 2. You record a payment of \$1,000 in Xero. 3. Paytrade imports this payment and marks it as Confirmed 4. In Xero - The payment is edited from \$1,000 → \$800 5. Open the error log in Paytrade. 6. Click Resolve. 7. It navigate to Payment screen where, Unconfirm the payment. 8. Once unconfirmed, Paytrade updates the payment to match the edited details in Xero (in this example, \$800 instead of \$1,000).
Payment	Payment Deleted in Xero	1. You have a Bill in Xero for \$1,000. 2. You record a payment of \$1,000 in Xero. 3. Paytrade imports this payment and marks it as Confirmed 4. In Xero - The payment is Deleted 5. Open the error log in Paytrade. 6. Click Resolve.

 CubeMatch Powering Change	XERO SPECIFICATION DOCUMENT		
	VERSION	V 1.0	
	DATE	03 December 2026	
	DOCUMENT CODE	FSD_PTAUS_003	

		- It navigate to Payment screen where, Unconfirm the payment. - Once unconfirmed, Paytrade updates the payment to get deleted.
Payment	Payment for Payless type	- First \$500 part payment → Paytrade records as “part payment”. - Remaining \$500 is cleared using credit note → Xero changes the payment type to “pay less full”. - Paytrade detects mismatch → triggers “unconfirm payment” error. - After unconfirming → old record is deleted and new “pay less full” record is created.
Payment	Reason for withholding payment	- Create a Bill with a payment type Part/Payless/Pay zero/Third party in Xero - In paytrade error log creates for ‘Withholding reason” - On submitting the reason the payment gets saved under paytrade.
Payment	Overpayment Mapping	- Invoice Amount in Xero: \$1,000 - Payment Made: \$1,200 - Xero applies \$1,000 to the Invoice. - The remaining \$200 becomes an overpayment. - When syncing to Paytrade, the system checks if the payment amount exactly matches the invoice amount. - Because $\\$1,200 \neq \\$1,000$, Paytrade identifies an inconsistency. Error: “Overpayment detected: The payment amount exceeds the Invoice amount.”
Payment	Underpayment mapping	Example - Bill 1 Amount: \$1,000 - Payment Made in Xero: \$1,200 - Bill 2 Amount: \$500 - You apply the \$200 overpayment credit from Bill 1 toward Bill 2. - New Payment Made for Bill 2: \$200 (credit) + \$300 additional payment = \$500 total applied Paytrade Result When syncing to Paytrade, the system checks if the complete Bill amount was paid. Since $\\$500 = \\500, Paytrade identifies that payment was made. Error: “Underpayment detected to map inorder to tally the overpayment from Bill 1 and underpayment from Bill 2.
